4 th February 2009	Quality	N/A
Product Description		
SL1200		

Details of Change

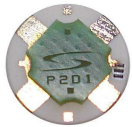

The ceramic elements will be marked with 'dashes', as shown in the picture below, to represent their frequency class. Sarantel currently has 4 different class variants of the SL1200 element to cater for customer applications. In general, the last digit of the product code for the antenna is representative of the frequency class by the number of dashes, i.e. SL1201 has 1 dash whereas SL1203 has 3 dashes. The only exception to this is for the active devices SL1204 & SL1206 they both use the class 5 elements.

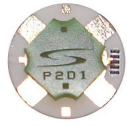

CLASS 1

CLASS 2

CLASS 3

CLASS 5

Reason for Change

To clearly identify antenna product after final test in our manufacturing plant. This will aid classification and help to ensure the correct product type are despatched for each order. This effort is a result of our continual improvement programme.

Outcome of Change

All products produced from this date will contain these marks.

The marking of the elements has no effect on form, fit or function to the product.

Depending on stock levels some initial orders may contain unmarked and marked product.
